Adnan Iftikhar has been working in independent schools in US for 25 years. He has spoken at events across the US and internationally. Most recently, he delivered a Keynote at an Alibaba Summit in Xiamen, China.

The current global situation is unlike any we have experienced in our lifetime. The shift in the education landscape is palpable and needs to be addressed in a way that is both healthy and thoughtful. We have a lot of tools and technology available to us which that provides us with many solutions and also gives us the opportunity to address many problems

One of the most important facets when considering Distance Learning is the health of your students. We will focus on the following questions:

What is the difference between synchronous and asynchronous learning?

How do you maintain connection with your students during Distance Learning?

What are some tools that you can use to help facilitate conversation?

What are some things you can do to create trust in a virtual environment?

How do you promote health for your students?

How do you take care of yourself?

These questions and more will be addressed in this webinar. We will be using tools including Google Suite, Flipgrid, Zoom and Kahoot to demonstrate and model the effective use of these tools within a virtual learning environment.
